

ATTENTION RESIDENTS Of Pache Homesites

Your home is located within one of our Community Sewer Systems. There are different types of systems, some have treatment plants, some are just lagoons and some require a lift station. Within your community in order to get the sewer waste from your home to our lagoons we have a lift station.

The lift station is used to move the wastewater from a lower elevation (level) to a higher elevation. Due to the various elevations within your community this type of system was required.

In the event the lift station fails the wastewater will collect in the lift station wet well (similar to a tank) and backup into the collection system (main lines). If it goes undetected it could eventually back up into homes. When the lift station fails, an alarm is sounded and a flashing light goes off. In addition, notice is sent to the Water Sewer Operators via our telemetry that there is a high wet well or other issue.

Your community has an alarm system, if you hear a buzzing alarm sound or see a flashing light near the lagoons please notify the Housing Authority. If it occurs after normal work hours or weekends please contact Law & Order at (406) 675-4700 and notify them of what is occurring and have them contact our On-Call Operator.

It is critical that you report this to our office as soon as possible.

To report problems with your water or sewer system please contact

Monday – Thursday 7 a.m. to 5: 30 p.m. (406) 675-4491 ext. 1508

After hours, Weekends or Holidays

(406) 675-4700 Request Water/Sewer On-Call Operator contact you.
